vikasverma-sigma.vercel.app

Summary

Computer Engineering student and **AI Engineer** building **RAG**, **multi-agent systems**, and **multimodal AI** (voice/video). At Tredence Analytics, built **AI evaluation** and **guardrail tooling** plus client-facing **GenAI** features end-to-end. Currently building an **in-app AI agent** controlled by voice or text. Founder of BlindCharm (**1K+ users**).

Technical Skills

Languages: Python, C++, JavaScript, SQL

AI & LLM: LLMs (OpenAI GPT-5, Groq), RAG Pipelines, Agentic AI, Multi-Agent Orchestration, Multimodal AI (voice, video), Prompt Engineering & Orchestration, Model Evaluation & Guardrails, Responsible AI, Vector DBs (FAISS, Chroma), LangChain, LangGraph

Backend & Platforms: FastAPI, PostgreSQL, REST APIs, n8n Workflow Automation

Frontend & Cloud: React, Next.js, AWS, Azure, Vercel, Supabase

Ways of Working: Agile delivery, stakeholder communication, technical documentation, Git, JIRA

Experience

AI Software Engineering Intern — Tredence Analytics

May 2026 – Jul 2026

GenAI, RAG, Agent Orchestration, Python

Bengaluru, India

- Owned and delivered a **client-facing telephony voice agent builder** end-to-end — from solution design through deployment — translating business stakeholder needs into a working, adoptable AI product for non-technical users.
- Designed and built **Benchmark Studio**, an **AI evaluation** and **guardrail** tool enabling annotators to create golden datasets and quality benchmarks, directly supporting model evaluation and reliability standards across the platform.
- Built a **RAG-based Support Agent** grounded in enterprise product documentation and codebase context (**AST parsing**), integrated with a **Microsoft Teams bot** for direct in-workflow access — a reusable AI platform reducing dependency on engineering for common queries.
- Collaborated cross-functionally with product and platform teams to extend **agent orchestration** and **tool-calling** modules, following **Agile** delivery practices.

GenAI Intern — SalesCode.ai

Feb 2026 – May 2026

Python, LangGraph, RAG, Multimodal AI, n8n

Remote

- Built **RAG pipelines** with **vector indexing** and semantic retrieval (**FAISS/Chroma**) powering a “Company Brain” knowledge system for enterprise-wide decision support over structured and unstructured sales data.
- Engineered a **BD transformation pipeline** combining **LangGraph** agentic orchestration with **n8n** workflow automation, sequencing lead research, outreach, and follow-ups into a single automated system.
- Built a real-time **multimodal voice-and-video meeting agent** (**Tavus** + voice models) that joins live Google Meet calls and converses with participants as a real-time participant, engineered for minimal latency.

Software Developer – AI Implementation & Deployments — Pixeltec

Sep 2025 – Dec 2025

React, Next.js, Supabase, Firebase

Remote

- Shipped **AI-driven features** for a live client product; integrated third-party APIs and built core product modules end-to-end.

Founder & Full-Stack Developer — BlindCharm

Aug 2025 – Dec 2025

Next.js, Supabase, PostgreSQL, AWS Rekognition (Part-time, alongside coursework)

Hyderabad, India

- Built and launched BlindCharm, an **AI matchmaking platform**, solo — grew to **1K+ users** with zero paid marketing, owning the solution from design through delivery.
- Built **AI-generated compatibility insights**, real-time chat, and moderation workflows; optimized core **PostgreSQL** queries to reduce page response time.

AI Model Evaluator — Outlier AI

Nov 2024 – Feb 2025

LLM Evaluation, Responsible AI (Part-time, alongside coursework)

Remote

- Evaluated **AI-generated code** and reasoning against structured quality rubrics, writing feedback used to improve **model alignment**, validation, and **responsible AI** output.

Projects

NehaHR — AI Outbound HR Calling Agent | Python, Voice AI, LangGraph, Scheduling APIs

Live | [GitHub](#)

- Built an end-to-end **AI HR agent** that autonomously makes outbound calls to candidates, conducts initial screening, and schedules interviews — reducing manual recruiter effort across the hiring pipeline.

Cairn — AI Agent That Operates Any App For You | TypeScript, LLM Agents, Voice AI

Live | [GitHub](#)

- Building an **in-app AI agent** that lets a user describe what they want done, by voice or text, and carries it out inside unfamiliar software — clicking, filling forms, and navigating like a real person; restricted to **schema-checked actions** for safety, published as **open-source npm packages**.

Education

Thapar Institute of Engineering and Technology

2023 – 2027

B.E. in Computer Engineering

Patiala, Punjab
